

# Web Development Application Lab

## Assignment - 4A

**Name : Atharva Dere**

**Roll No : 33219**

**Class : TE-10**

### **Problem Statement :**

Create a simple Mobile Website using jQuery Mobile.

### **Screenshots :**

The screenshot shows a mobile application interface titled "Enrollment Form". It features a "Form Page" with several input fields: "Name", "Roll No", "College", "Select Date" (with a date picker icon), and "Select File" (with a "Choose file" button and the text "No file chosen"). At the bottom, there are two tabs: "Forms" (active, with a grid icon) and "Resources" (with a star icon).

This screenshot shows the same "Enrollment Form" mobile application interface, but with data entered into the form fields. The "Name" field contains "Akash Kulkarni", "Roll No" contains "33241", "College" contains "PICT", and "Select Date" contains "08/04/2022". The "Select File" field now shows a "Choose file" button followed by the text "Screen Shot 20... at 10.46.02.png". The bottom tabs "Forms" and "Resources" remain the same.
